

(Mynewsdesk) The second project located in East Sussex will again be delivered for Low Carbon, the financial investor. The project has a capacity of 8.2 MWp and construction starts in October with energisation of the project in early 2015.

abakus solar again is responsible for the engineering and the design of the solar power plant and is also leading on the qualification process of the main photovoltaic components and commissioning of the plant.&nbsp;&nbsp;&

?We are happy to execute this second project under our successful cooperation structure with Bouygues E&S and are looking forward to realise more projects within the next months?• says Roland Wigger, CEO of abakus solar AG.
