

Garuda Indonesia starts taking delivery of new A330-300 fleet

Garuda Indonesia starts taking delivery of new A330-300 fleet
Aircraft feature premium products for long range services
Garuda Indonesia, the national carrier of Indonesia, has taken the delivery of the first of its new fleet of 18 A330-300s at a special ceremony in Toulouse today. The new aircraft will form a major element in the airlines fleet modernisation programme and are powered by Rolls-Royce Trent 700 engines. The airlines new A330-300s feature a two class premium layout, with 36 seats that convert to full flat beds in Business Class and an extra spacious Economy cabin with an average seat pitch of 33-34 inches. Garuda Indonesia will operate the aircraft from its hubs in Jakarta and Denpasar (Bali) to destinations across Asia, the Middle East and the Pacific. The aircraft will join an existing Airbus fleet at the airline that currently includes 10 recently acquired A330-200s, used primarily on long range routes, and six early version A330-300s flying on domestic and shorter regional services. The A330 has been a key element in the success of Garuda Indonesia, said Emirsyah Satar, President > CEO, Garuda Indonesia. "It remains one of the most efficient aircraft types on the market today and is a firm favourite with our passengers, offering the highest levels of in-flight comfort. Garuda Indonesia currently operates 106 aircraft and with its quantum leap programme, will be operating 194 by 2015. "With its new A330-300s Garuda Indonesia will benefit from proven operational reliability and the lowest possible operating costs, said John Leahy, Chief Operating Officer, Customers, Airbus. "At the same time, the airlines passengers will be able to relax in one of the most comfortable cabins in the sky, with more space and wider seats in both classes than on competing aircraft in this size category. The twin engine A330 is one of the most widely used widebody aircraft in service today. To date, Airbus has recorded over 1,250 orders for the various versions of the aircraft and more than 1,000 are flying with 100 operators worldwide. Over 1.2 billion passengers have enjoyed travelling on the aircraft which currently operates out of 300 airports across the world. > EADS Space Transportation > Hünefeldstr. 1-5 > 28199 Bremen > Telefon: +(49) 4 21/5 39-51 07 > Telefax: +(49) 4 21/5 39-34 31 > URL: <http://www.eads.net/>
