

Eni renewed the Framework Agreement with the Consiglio Nazionale delle Ricerche (CNR)

Eni renewed the Framework Agreement with the Consiglio Nazionale delle Ricerche (CNR) The agreement has been signed by the CEO of Eni, Paolo Scaroni, and by the President of the CNR, Luigi Nicolais Rome, 25 February 2014 - Eni has today renewed the Framework Agreement with the Consiglio Nazionale delle Ricerche (CNR) for cooperation in research, focused on the production of sustainable energy, environmental safeguard and experimentation of new technologies. The agreement has been signed by the CEO of Eni, Paolo Scaroni, and by the President of the CNR, Luigi Nicolais, during the workshop attended also by Professor Giovanni Bignami, President of the National Institute for Astrophysics (INAF), and Professor Peter Wadhams, of Cambridge University, holding a lecture on Climate change and the Arctic environment. The activities envisaged by the agreement involve Eni's engineers and researchers in an extensive applied research programme on several areas of interest, including the testing of new techniques for the characterization of hydrocarbon reservoirs; environmental monitoring activity finalized to the sustainability of the production of oil and gas, eco-sustainable solutions for mobility and environmental protection; the experimentation of advanced solar energy cells. The agreement assures the ongoing activities a framework of rules governing mutual relations and the management of intellectual property and simplifies the procedural aspects. The goal is to create a portfolio of innovative solutions on the energy and environment fields, of strategic importance for Italy and Europe as a whole. The Eni-CNRs scientific cooperation, started since 2009, has already produced successful results in various fields. In Eni's core business as well as in the area of non-conventional energy sources and environmental protection, innovation technology is an essential incentive for sustainable energy development, hence, central to the company's medium-to-long-term strategy. In fact, in the four year term Eni plans to spend about 1,1 billions for R&D activities. Furthermore, Eni has also developed a series of strategic alliances and scientific collaborations with universities and research centres of internationally recognised excellence. Among Eni's most prestigious partnerships, there are those with M.I.T. (Massachusetts Institute of Technology) and Stanford University. In Italy, beside CNR, Eni has also signed framework research and development agreements with the Polytechnics of Milan and Turin. Eni is one of the largest integrated energy companies in the world, operating in the sectors of oil and gas exploration > production, international gas transportation and marketing, power generation, refining and marketing, chemicals and oilfield services. Eni is active in 90 countries with 78,000 employees. Our commitment to sustainable development means that we grow and retain our people, contribute to the development and wellbeing of the communities in which we operate, protect the environment, and invest in technological innovation and energy efficiency, mitigating the risks of climate change. Consiglio Nazionale delle Ricerche (CNR) CNR is the Italian National Research Council with broad scientific competences, monitored by the Ministry of Public Education, of the University and the Research (MIUR). The scientific network has about 8000 employees with 100 Institutes organized in 7 Departments. The dimension, the organization and a distribution over the whole national territory outline CNR as the biggest Italian Research Institution, characterized by a remarkable multidisciplinary approach which enhances itself among other entities and yet, one of the major in the international panorama. CNR's mission is summarized in the following goal "create value through knowledge generated by research, pursuing, through scientific research development and innovation boost, a competitive productive system and the fulfillment of the citizens individual and collective needs. The foundation of such a mission is based on the idea that research and development activities are crucial to produce more occupation, wealth and social cohesion.
