

Success story in Knowledge and Technology Transfer at the University of Stuttgart

Success story in Knowledge and Technology Transfer at the University of Stuttgart
At Europe's largest trade fair for intralogistics LogiMAT, taking place from 25th until 27th February 2014 in Stuttgart, the double-skid system produced by Eisenmann (Böblingen) was awarded the "best product in the category "procuring, conveying, storing". The University of Stuttgart also had cause for celebration: this autonomous transport unit was developed at the Institute of Conveying Technologies and Logistics (IFT) under the management of Prof. Karl-Heinz Wehking and registered for patent approval in cooperation with the Technology Licensing Bureau (TLB) of Baden-Württemberg Hochschulen GmbH (Karlsruhe).
In many business fields small autonomous machines are replacing an increasing number of large and centrally controlled systems. A prime example of this development is the invention of the double-skid system in the field of intralogistics. This is a small self-propelled lift truck, able to lift and transport pallets and other cargo carriers.
The double-skid system independently drives under pallets. With a dead weight of less than 100 kilograms, the means of transport stems loads up to one ton via rotation movements of its four drive units.
Head of the IFT Institute Prof. Karl-Heinz Wehking: "The driverless double-skid system revolutionises the operational sequences in transport and warehouse logistics. The fields of application are diverse and the investment and maintenance costs comparatively low."
Prof. Thomas Graf, Pro-Rector Knowledge and Technology Transfer, underlined the significance of transfer activities for the University of Stuttgart and described the licensing of the double-skid system as one of the greatest and financially most successful license sales to date: "In July 2013 the University of Stuttgart and Eisenmann concluded a licensing and development agreement. We are delighted with the award from the LogiMAT trade fair since the double-skid system is a prime example for us of the successful cooperation between the University of Stuttgart and partners from industry and business."

Die Universität Stuttgart liegt inmitten einer hochdynamischen Wirtschaftsregion mit weltweiter Ausstrahlung, einer Region, die sich auf den Gebieten Mobilität, Informationstechnologie, Produktions- und Fertigungstechnik sowie Biowissenschaften profiliert hat. Die Stuttgarter Hochschule, die im Jahr 2004 ihr 175-jähriges Jubiläum feierte, wurde 1829 zu Beginn des industriellen Zeitalters in Europa gegründet. Die Kooperation zwischen technischen und naturwissenschaftlichen sowie und geistes- und sozialwissenschaftlichen Fachrichtungen zählte immer zu der besonderen Stärke der Universität Stuttgart. Mit diesem Anliegen hat sie sich zu einer modernen leistungsorientierten Universität mit umfassendem Fächerkanon und einem Schwerpunkt in den technischen und naturwissenschaftlichen Disziplinen entwickelt. Nicht ?Berufsqualifizierung allein ist die Maxime, sondern ?Technik, Wissen und Bildung für den Menschen lautet der Wahlspruch der Universität Stuttgart.
